

**Protect your investment with the patented Radiant Edge ice melt system. Summit Ice Melt Systems provides the most complete line of products to suit your specific needs.**

Our unique, innovative, and energy-efficient systems are optimized for different roof designs and snow loads. They effectively prevent damaging icicles, ice dam formations and leaks.

Summit Ice Melt Systems is the synergy of decades of expert roofing and manufacturing in heavy snow country, combined with world-renowned experts in thermodynamics and heat transfer efficiency.

Every detail is engineered for ease of installation and energy efficiency:

- Clean, architectural lines
- Fast installation and easy operation
- Flexibility with any kind of roofing

Add to that the Radiant Edge's unparalleled operational cost savings and you've found the best value and performance available in roof ice melt systems.

"Radiant Edge", "Radiant Edge PRO", "Radiant Edge LT", "Radiant Edge LowSlope" "HotSlot" and "Thermodynamics analyzed. Applied" are trademarks of Summit Ice Melt System, Inc. Protected under U.S. Patent #8,946,601 and other patents pending.

**Thermodynamics analyzed. Applied.**

Summit's efficiency saves 30-50% or more energy over the competition. 100% of our systems are made from recycled aluminum and are 100% recyclable.

### Radiant Edge PRO

The patented Radiant Edge PRO is our top-of-the-line ice melt system that's designed to tame nature's most extreme winter conditions. It is proven in the coldest, snowiest environments. Select PRO when you want the very best.

### Radiant Edge LT

The patent-pending LT is our mid-line roof ice melt system. It gets top marks for performance/cost ratios. It is ideal for light and moderate snow zones, and has superior performance qualities.

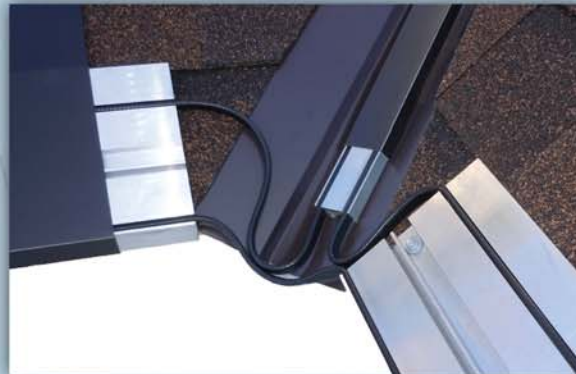

### Radiant Edge HotSlot

The patent-pending HotSlot replaces unsightly zig-zag cables and eliminates roof edge ice formations. The massive, one-piece, one-size-fits-all element that provides protection and easy installation that's affordable in any budget.

### Radiant Edge LowSlope

LowSlope prevents ice formations on the toughest roof designs. Its unique fascia-plane heater profile allows installations from steep roofs down to  $\frac{1}{4}$ " in 12 slopes. It works with metal, shingle and all flat roofing materials.

### Radiant Edge Valley

Valleys are particularly prone to ice dam problems. Radiant Edge Valley prevents dangerous ice dams in these areas, and is the perfect companion to the entire Radiant Edge family of ice melt systems.

### Radiant Edge Standing Seam Metal Roofing

At last, a bona fide heated standing seam metal roofing system. The integral, waterproof batten seam cleverly houses the heating elements. Available in real copper and pre-painted aluminum.

#### Accessories

Summit provides everything you need: self-regulating heater cables, power connection kits, splice and power connection kits, fasteners, and more.

#### Controllers

Summit manufactures a selection of controls for your ice melt system. Sensors turn the systems on and off as needed. User-friendly digital controllers enable safe, reliable set-and-forget operation.

#### Technical Support at SummitIceMelt.com

Expert engineered design assistance. Visit our technical/download page for product data sheets, installation guides, architectural guide specifications, schematics, and much more.
